

ePrakriti - A workbook for landscape based planning using geo-informatic tools

E-Prakriti - An Approach Towards GIS Based Planning For Natural Farming (Индия)

E-Prakriti

ОПИСАНИЕ

The e-Prakriti approach is a GIS-based planning approach that integrates natural farming interventions for effective management, monitoring, and conservation of natural resources at the landscape level. It can be applied for projects such as soil and water management, land reclamation, crop and seed systems design and agri-infrastructure mapping. To establish and maintain an e-Prakriti system, it is necessary to collect and manage data effectively, to build capacity among stakeholders, to have the appropriate technology infrastructure in place and to promote the engagement of local communities with conservation organizations.

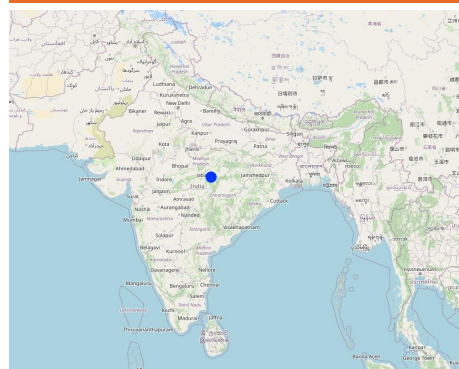

The e-Prakriti approach is a planning method that utilizes GIS tools to integrate ecosystem-based natural farming interventions into agricultural operations. It focuses on creating scientific and efficient planning techniques that consider the landscape as a unit, such as a Village, Block, District and watersheds or river basins. This approach uses open-source datasets, including spatial and non-spatial data, to develop a comprehensive activity plan for natural resource management at a landscape level and having natural farming approaches as its core.

To facilitate the planning process using the various open-source platforms, GIZ has developed a comprehensive guide cum training module under the Pro-Soil Project. This guide comprehensively captures the different open-source platforms and their application to the local context, so to plan and implement natural-farming based interventions. The guide can be used to build the capacity of local-community resource persons, members of local self-governance (Panchayati Raj) institutions and other projects working at the village or cluster level.

The primary purpose of e-Prakriti is to enable effective and efficient management, monitoring, and conservation of natural resources, including sustainable soil management, water management, degraded land reclamation, crop and seed system design, bio-resource and fodder assessment, agro-infrastructure mapping, and the planning of sustainable enterprises. This e-Prakriti approach is used to conduct inventory and management of natural resources, such as forests, wetlands, and wildlife habitats, by mapping the extent and distribution of these resources and tracking their use and status over time. The e-Prakriti approach monitors changes in natural resources, evaluates the effectiveness of conservation measures, and identifies areas that require further intervention. Additionally, e-Prakriti technology can support planning and decision-making related to natural resource management by identifying areas most suitable for conservation or development activities.

Establishing and maintaining an e-Prakriti approach requires data collection on natural resources, effective data management, building capacity among stakeholders, appropriate technology infrastructure and institutional support. The benefits and impacts of the e-Prakriti approach include promoting sustainable development, improving natural resource management, reducing disaster risks, increasing community participation, improving policy

МЕСТОПОЛОЖЕНИЕ

Местоположение: Changariya village, Bichiya block,, Madhya Pradesh, Индия

Географическая привязка выбранных участков

- 80.37905, 22.6043
- 80.37814, 22.6039
- 80.37814, 22.6039

Дата ввода в действие: н/п

Дата завершения: 2023

Тип Подхода

- ☐ традиционная/ местная система землепользования, используемая коренным населением
- ☐ недавняя местная инициатива/ инновация
- ☒ в рамках проекта/ программы

GIZ has collaborated with the State Rural Livelihood Mission of Madhya Pradesh (MP-SRLM) for the practical application of the e-Prakriti approach in the planning process by the local community resource persons. GIZ provides training and operational support to team members for the successful application of e-Prakriti approaches in day-to-day work.

The objective of this tool is to create a scientific and efficient approach for planning natural farming interventions through the use of GIS-based mapping

- **Социальные/ культурные/ религиозные нормы и ценности:** E-prakriti proposes comprehensive planning by the adequate blending of technology with sustainability approaches, local wisdom, community participation and departmental convergence
- **Институциональные условия:** The effective cooperation of actors like communities, Government Departments and other institutions is enabled by natural-farming planning approaches using GIS Tools.
- **Сотрудничество/ координация действий:** The validation of GIS data is done through on-ground validation and extensive interpretation from maps. Community consultations are crucial in the planning process and convergence planning with the concerned Government Departments is necessary for comprehensive planning. Technical training in basic GIS-based software handling is essential for departmental engineers and other technically competent functionaries.
- **Объем работ, доступность рабочей силы:** e-Prakriti can significantly reduce the workload of planners and implementers as it reduces the need for physical visits to each and every village to collect ground-level data. A lot of data with very high accuracy can be collected from the satellite-based imaging systems.

УЧАСТИЕ И РАСПРЕДЕЛЕНИЕ РОЛЕЙ ЗАИНТЕРЕСОВАННЫХ СТОРОН

Какие заинтересованные стороны/ организации-исполнители участвовали в реализации Подхода?	Перечислите заинтересованные стороны	Опишите роли заинтересованных сторон
местные землепользователи/ местные сообщества	Local community members, farmers	They have provided the data and information during the ground proofing exercises
организации местных сообществ	Local Community - Participation of local groups in implementing the program activities. Community representatives from villages - support/drive the program's activities.	Community consultations are critical in promoting sustainable development interventions. It is vital to adequately prepare the community for the actions required, and community representatives must be involved at all planning levels, starting from the ground level. The principles of inclusivity and cooperation are crucial in building trust and promoting effective collaboration among community members. The community's input is essential in creating a suitable action plan and

		developing maps at the beginning and end of the planning process through larger community consultations. By involving the community in this way, the intervention is more likely to be successful, sustainable and aligned with the community's needs and aspirations. This approach ensures that the community is adequately prepared to undertake the required actions and the intervention is more likely to have a positive impact on the community's well-being in the long run.
эксперты по УЗП/ сельскому хозяйству	1. Team from GIZ and consultants who developed the e-Prakriti module 2. Specialist from project implementing team	SLM specialists from GIZ, from the implementing agency, other consultants from the domain of GIS and satellite-based applications have developed the e-Prakriti module. They have looked into the specific requirements for planning the natural farming interventions and available open source platforms to meet that requirement. Once this is developed they also did some ground truthing exercises in the field to observe the accuracy of collected data along with application in the field.
учителя/ преподаватели/ школьники / студенты	Local Community Representative (Community Resource Person)	The CRP is trained to use the E-Prakriti tools for planning natural farming practices. He/she engages with village groups and the program team for planning, implementation and execution. They are considered the most important stakeholders in the process as it is expected that CRPs will use this tool in the planning of their activities.
общественные организации	Foundation for Ecological Security (FES) NGO	FES is involved in piloting the approach in villages, handholding for the implementation and monitoring the work. Scaling up plans with different agencies is undertaken once the piloting is successful and evidence is generated.
местные власти	Gram Panchayat (village self governing body) Liaison with different government departments concerned viz. Departments like Water Resource, NREGS, Animal Husbandry, Agriculture, Horticulture, Panchayat etc.	Convergence planning is crucial for the successful implementation of natural farming as it extensively relies on the utilization of common natural resources. This can only be achieved through the integrated effort of various concerned Departments, such as Water Resources, NREGS, Animal Husbandry, Agriculture, Horticulture, Panchayat, etc. Therefore, it is essential to hold joint consultations with these departments to ensure that everyone is on the same page and has a shared understanding of the objectives and strategies for natural farming. These consultations can help to identify the potential areas of collaboration and the specific roles and responsibilities of each department in the implementation of natural farming practices. In addition to engaging with the relevant departments, it is equally important to involve the district administration in the planning process. The District Collector, CEO of Zila, and Block Panchayat can play a facilitative role in bringing together the various departments and stakeholders involved in natural farming, promoting collaboration and convergence among them. Through effective convergence planning, it is possible to achieve better coordination and utilization of resources, resulting in improved outcomes for natural farming. This will also contribute to the sustainable development of rural communities and the conservation of natural resources in the long run.
международные организации	Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH	Collated the experiences and prepared the workbook that gives an overview of planning for natural farming using open-source data

Участие местных землепользователей/ местных сообществ на разных стадиях реализации Подхода

	нет	пассивное	внешняя	поддержка	интерактивное	самоорганизация
инициирование/ мотивация		✓				
планирование				✓		
выполнение					✓	
мониторинг/ оценка				✓		

They have been discussed to understand their specific needs, resources availability and applications for developing the basic understanding. Local community institutions were involved in the process of planning to understand the local cost specifications, local cropping patterns and to collect and validate the data points.

Local community institutions did implement the interventions with technical guidance from the project implementing team.

During the monitoring process images and data points collected from the satellites were physically validated from the community members. Also, discussions are held with communities to understand the social and economic impact of the project interventions.

Схема реализации Подхода

In order to effectively plan for natural farming using GIS tools, it is important to involve the larger systems around the community and the community itself. The first step is to identify and define a unit of intervention, such as a village. Open-source satellite data can then be used to understand and estimate various factors such as geomorphology and geohydrology. This data can be complemented with other available data from sources such as the Ground Water Board or the NREGS portal.

Using QGIS tool, the various data sets can be superimposed to find relationships between them. On-ground validation (truthing) of the GIS data is also necessary to ensure its accuracy. Once the data sets are gathered, an extensive interpretation from maps is undertaken, and the data is translated into easily understandable and implementable material for the community.

Community consultations are a critical part of the intervention, with community representatives being involved at all levels of planning. Inclusivity and cooperation are key principles in engaging the community and government departments and institutions for the judicious use of common resources. Larger community consultations are held at the beginning and end of the planning process to arrive at a suitable action plan using the prepared maps.

The planned actions and locations are plotted on maps on Google Earth, and convergence planning is necessary for the integrated efforts of several concerned departments. Joint consultations are held with these departments, and the district administration can play a facilitative role in bringing everyone on the same page. Lastly, it is important to train departmental engineers, Rozgar Sahayaks, and other technically competent functionaries in basic GIS-based software such as Bhuvan, QGIS, India-WRIS, and Bhuvan Panchayat to extract necessary data.

Принятие решений по выбору Технологии УЗП

Решения принимались

- ☐ исключительно землепользователи (по собственной инициативе)
- ☐ в основном землепользователи при поддержке специалистов по УЗП
- ☒ все участники как часть процесса совместных действий преимущественно специалисты по УЗП после консультаций с землепользователями
- ☐ исключительно специалисты по УЗП
- ☐ политики/ руководители

Принятие решений было основано на

- ☐ анализ подробно описанного опыта и знаний по УЗП (принятие решений на основе подтвержденных фактов)
- ☒ результаты исследований
- ☒ личный опыт и мнения (незадокументированные)

ТЕХНИЧЕСКАЯ ПОДДЕРЖКА, ПОВЫШЕНИЕ КОМПЕТЕНЦИЙ И УПРАВЛЕНИЕ ЗНАНИЯМИ

Следующие мероприятия или работы являлись частью Подхода

- ☒ Повышение компетенций/ обучение
- ☒ Консультационные услуги
- ☐ Институциональная (организационная) поддержка
- ☒ Мониторинг и оценка
- ☐ Научные исследования

Повышение компетенций/ обучение

Обучение было предоставлено следующим заинтересованным лицам

- ☐ землепользователи
- ☒ местный персонал/ консультанты

Тип обучения

- ☒ в ходе работы
- ☐ обмен опытом между фермерами
- ☒ опытные участки
- ☐ общие собрания
- ☒ курсы

Рассматриваемые темы

- 1 Village boundaries
- 2 Village Assets and Infrastructure
- 3 Watershed / Sub-basin Map
- 4 Natural Drainage line
- 8 Availability of groundwater
- 5 Further resources on Water
- 5 Geomorphology
- 6 Slopes within the topography
- 7 Lineaments- cracks in the land for the generation of aquifers
- 8 Soil Erosion
- 10 Soil kinds/data
- 11 Land usage pattern
- 12 Crop season land
- 13 Wastelands Map

Консультационные услуги

Консультационные услуги были предоставлены

- ☒ на полях землепользователей
- ☐ в постоянно функционирующих центрах

Мониторинг и оценка

This tool can be used for monitoring the project interventions by having the pre- and post-project images from the satellite

ФИНАНСИРОВАНИЕ И ВНЕШНЯЯ МАТЕРИАЛЬНАЯ ПОДДЕРЖКА

Годовой бюджет мероприятий по УЗП в долларах США

- ☒ < 2000
- ☐ 2000-10000
- ☐ 10000-100000
- ☐ 100 000-1 000 000
- ☐ > 1 000 000

Precise annual budget: н/п

The major cost involved is in developing the e-Prakriti module, the cost of which was incurred by the GIZ. Another important cost component is capacity building of the stakeholders.

Землепользователям были оказаны/предоставлены следующие услуги или меры стимулирования

- ☐ Финансирование и внешняя материальная поддержка, предоставляемая землепользователям
- ☐ Субсидии на отдельные затраты
- ☐ Кредитование
- ☒ Другие методы или инструменты стимулирования

Другие методы или инструменты стимулирования

Training and handholding of stakeholders

АНАЛИЗ ВЛИЯНИЯ И ЗАКЛЮЧИТЕЛЬНЫЕ ПОЛОЖЕНИЯ

Влияние Подхода

Сумел ли Подход расширить возможности местных землепользователей, повысить участие заинтересованных сторон?

The targeted areas that specifically needed conservation work were focused on

Нет
Да, немного
Да, умеренно
Да, существенно

☐ ☐ ☒ ☐

Сумел ли Подход дать возможность принимать решения на основе подтвержденных фактов?

This has been the most important purpose of this approach. The use of various spatial tools ensured evidence-based decision-making

☐ ☐ ☐ ☒

Сумел ли Подход помочь землепользователям внедрить и поддерживать технологии УЗП?

The approach may be a great tool for effective and efficient natural farming-based practices and other SLM technologies

☐ ☐ ☐ ☒

Сумел ли Подход улучшить согласованность действий и повысить рентабельность применения практик УЗП

Yes. It has been of great use

☐ ☐ ☐ ☒

Сумел ли Подход мобилизовать/ расширить доступ к финансовым ресурсам для применения практик УЗП?

Developing projects using the technology has ensured effective financial planning for the planned interventions

☐ ☐ ☐ ☒

Сумел ли Подход расширить знания и возможности землепользователей в применении практик УЗП?

Land users and local community resource persons learned about the various tools and technologies available for scientific planning

☐ ☐ ☐ ☒

Сумел ли Подход расширить знания и возможности других заинтересованных сторон?

Community resource persons

☐ ☐ ☐ ☒

Сумел ли Подход укрепить сотрудничество между заинтересованными сторонами/ выстроить механизмы сотрудничества? Stakeholders like farmers, FPOs, local community resource persons, NGOs, Government institutions all are in a position to apply a coordinated approach by using this tool	<input type="checkbox"/> <input type="checkbox"/> <input checked="" type="checkbox"/>
Сумел ли Подход снизить остроту конфликтов? Better mapping of resources could mitigate some conflicts among the community members	<input checked="" type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
Сумел ли Подход содействовать гендерному равенству и расширить права и возможности женщин и девочек? The promotion of natural farming empowers women members as they are core to it. Families get an access to safe and healthy foods as well.	<input type="checkbox"/> <input checked="" type="checkbox"/> <input type="checkbox"/>
Сумел ли Подход стимулировать молодежь/ будущее поколение земледельцев заниматься УЗП?	<input type="checkbox"/> <input checked="" type="checkbox"/> <input type="checkbox"/>
Сумел ли Подход привести к более эффективному использованию электроэнергии/ возобновляемых источников энергии?	<input type="checkbox"/> <input type="checkbox"/> <input checked="" type="checkbox"/>
Сумел ли Подход улучшить способность земледельцев адаптироваться к изменениям климата и смягчать последствия катастрофических погодных явлений?	<input type="checkbox"/> <input checked="" type="checkbox"/> <input type="checkbox"/>

Основные причины, побуждающие земледельцев внедрять УЗП

- ☐ рост продуктивности
- ☐ рост прибыли (доходности) и рентабельности
- ☐ снижение деградации земель
- ☐ снижение риска катастрофических погодных явлений
- ☒ снижение объема работ
- ☐ материальное стимулирование/ субсидии
- ☐ нормативно-правовое регулирование (штрафы)/ контроль
- ☐ престиж, общественное давление/ солидарность
- ☐ причастность к движению/ проекту/ группе/ сети
- ☒ экологическая сознательность
- ☐ традиции и верования, нравственные ценности
- ☒ приобретение знаний и опыта в области УЗП
- ☐ улучшение эстетической привлекательности
- ☐ снижение остроты конфликтов

Долгосрочная устойчивость мероприятий в рамках Подхода

Могут ли земледельцы самостоятельно (без внешней поддержки) продолжать применение того, что было реализовано в рамках Подхода?

- ☐ нет
- ☒ да
- ☐ нет уверенности

The approach developed is a guidebook, which can be used by anyone using the available open-access platform which is free to use

ЗАКЛЮЧИТЕЛЬНЫЕ ПОЛОЖЕНИЯ И ИЗВЛЕЧЁННЫЕ УРОКИ

Сильные стороны: по мнению земледельцев

- Efficient mapping of the resources available to different stakeholders which sometimes community members may not be aware of
- Convergence opportunities with different line departments once resources are mapped and activities are finalised
- Reduced workload of the community members and their institutions as they need not be physically present every time

Сильные стороны: по мнению составителя или ответственных специалистов

- Scientific and evidence based method of planning with a lot of saving in time and resources with better accuracy. Sometimes connecting with communities as well as visiting field areas take a lot of time.
- The approach can also be used for developing the financial outlays for the shortlisted interventions by getting the physical inputs, conducting the assessments through images and maps collected from open access platforms
- The e-Prakriti approach can be very effective in the monitoring of the project interventions as satellite-based maps of pre- and post-interventions or geotagged images may provide scientific evidences

Слабые стороны/ недостатки/ риски: по мнению земледельцев

- Not much exposed to this approach for planning Handholding through demonstrations
- Availability of computer devices to access the maps Although computers are available at affordable prices in some cases, there may be financial support from the project or government agencies

Слабые стороны/ недостатки/ риски: по мнению составителя или ответственных специалистов

- Technology keeps on updating thus the users need to update and upgrade themselves to ensure the usages at ground Regular training and handholding of the users either physically or remotely
- Availability of high speed internet for using the platforms; Currently most land users and CRPs do use internet using their mobile hotspots, access to wi-fi may may not be there Identified planners or CRPs can be provided with internet devices or they can be linked with Wi-Fi available at different Government bodies
